Category 4: Basement

- We separated the exercise area from the children's play area with a staggered wall and left openings for glass block application which gives both areas a defined separation while still joining the two.
- For the office area we installed double French doors, to give some privacy when the room was being used. The doors let all the natural light from the

Before

window penetrate into the main living space.

- The bathroom was a three piece: shower, toilet, vanity and all accessories.
- The walk up bar was done with upper and lower millwork which encompassed a wine cooler, fridge, sink, under counter lighting and backlighting on top of the cabinets.
- The media wall incorporated the TV and accessories. The homeowner requested a fireplace be added. We wall mounted an electric fireplace and faced same with faux slate and extended some mantels for accent pieces. The utility room was enclosed and shelving built around the perimeter for all their storage needs.
