## RENOVATION AWARDS

### ALL CANADIAN RENOVATIONS

#### Category 3: Bathroom

- As part of the construction all consideration was made to have all upgrades in insulation with eco friendly productions as well as energy efficient windows.
- In order to solve plumbing issues without destroying the first and second floors, we opened up the exterior of the house to change the plumbing stack all the way down to the basement.
- In addition, due to the larger volume of water now required for a 7' bubble tub, the steam shower with two water jet towers and rain shower head, we added a new 1" water supply to the third floor.
- To compliment this unique bathroom in floor heat was installed beneath the tiled floor.
- Tiling was also applied to the tub skirting and up the walls and as well throughout the interior of the shower.
- A custom maple vanity cabinet was made to support a granite top with double sink and wall faucets.

**VALUE OF PROJECT:**  
\$60,000.00
